Junior Java Backend Developer

Experience: 0-2 years | Engineering | Fictional test vacancy

ROLE OVERVIEW

Develop Java backend services and database-backed REST APIs. Relevant internships, coursework and personal projects are accepted for entry-level applicants.

REQUIRED SKILLS

Java fundamentals, object-oriented programming, collections and exception handling.

Practical use of Spring Boot for REST APIs, request validation and error handling.

SQL and a relational database such as PostgreSQL or MySQL; basic JPA or Hibernate integration.

Git version control, Maven builds and unit tests using JUnit.

RESPONSIBILITIES

Implement and debug API endpoints, integrate relational storage, and write tests for application behaviour.

Participate in code reviews and explain your personal contribution, database choices and testing approach for a relevant project.

PREFERRED QUALIFICATIONS

Containerize an application with Docker.

Basic practical deployment to AWS and familiarity with application configuration.

EDUCATION

Computer science or a related qualification, or equivalent practical learning. Professional employment is not required for fresh graduates.
