Junior Python Developer

Standard Job Description

Department: Engineering / Product Development

Reports To: Senior Software Engineer / Engineering Manager

Experience Level: 0–2 years

Role Overview

We are looking for an enthusiastic and detail-oriented **Junior Python Developer** to join our growing engineering team. In this role, you will assist in developing, testing, and maintaining Python-based applications, writing clean scripts, and integrating APIs or databases. You will work closely with senior developers and cross-functional team members to learn best practices and ship reliable software.

Key Responsibilities

- **Write and Maintain Code:** Develop clean, readable, and well-documented Python code for backend services, automation scripts, or data utilities.
- **Bug Fixing & Debugging:** Troubleshoot, test, and resolve software defects or performance bottlenecks.
- **Database & API Integration:** Assist in connecting applications to relational or non-relational databases (e.g., PostgreSQL, MySQL, SQL) and third-party RESTful APIs.
- **Testing:** Write and execute basic unit tests to ensure code quality and prevent regressions.
- **Collaboration:** Participate in team code reviews, daily stand-ups, and Agile/Scrum planning sessions.
- **Continuous Learning:** Rapidly adapt to new tools, internal architecture, and project requirements.

Required Skills & Qualifications

- **Education:** Bachelor’s degree in Computer Science, Software Engineering, IT, or equivalent practical experience.
- **Programming Knowledge:** Solid understanding of Python fundamentals, Object-Oriented Programming (OOP), and data structures.
- **Frameworks:** Familiarity with at least one web framework such as Django or Flask.
- **Tools & Databases:** Experience with version control systems like Git / GitHub, basic knowledge of SQL, and familiarity with package management tools like pip.
- **Soft Skills:** Strong problem-solving mindset, good written and verbal communication, and an eagerness to learn and accept constructive feedback.

Preferred / Nice-to-Have Skills

- Familiarity with front-end basics (HTML5, CSS3, JavaScript).
- Exposure to cloud platforms (AWS, GCP, or Azure) or containerization (Docker).
- Experience with data libraries (e.g., Pandas, NumPy) if the role leans toward data or scripting.
