Maya Demo

maya.demo@example.com | Python backend developer | Fictional candidate

PROFILE

Junior developer focused on Python web APIs, SQL databases, testing and maintainable backend code.

SKILLS

Python, OOP, data structures, Flask, REST APIs, SQLAlchemy, PostgreSQL, SQLite, Git, pytest and debugging.

EXPERIENCE

Python Development Intern, Example Software Studio (fictional) | January-June 2026

Implemented Flask routes for creating, updating and searching customer records. Added JSON input validation, relational persistence and consistent error responses.

Wrote pytest unit tests and API tests, diagnosed failing SQL queries, and fixed a transaction rollback issue. Used Git feature branches and incorporated code-review feedback.

PROJECTS

Inventory API: Personally designed product and stock-movement tables in PostgreSQL and implemented CRUD routes, filtering and stock-adjustment transactions.

Added validation for negative quantities and missing products. Tested success cases, invalid requests and rollback behaviour with pytest using a separate test database.

Course Registration Service: Built a Flask and SQLite API using classes for enrolment rules and dictionaries for validation errors. Documented my schema choices and tested duplicate enrolments.

EDUCATION

B.E. Computer Science, Example Institute | 2026. Coursework: OOP, data structures, relational databases and software testing.
