Neel Demo

neel.demo@example.com | Recent graduate | Fictional candidate

PROFILE

Recent computer science graduate seeking a first professional role. Practical experience comes from academic team projects and independently built applications.

SKILLS

Python, OOP, data structures, Flask, SQLite, PostgreSQL, Git, pytest, Docker, basic AWS deployment, HTML, CSS, JavaScript and Pandas.

PRACTICAL EXPERIENCE

Academic Software Engineering Project | January-May 2026

Owned the Python backend for a four-person campus event application. Designed relational tables for events and registrations; implemented Flask REST routes, request validation and HTTP errors.

Added pytest cases for duplicate registrations, missing events and capacity limits. Used Git branches and reviewed teammates changes. Debugged a failing SQL join during integration.

PROJECTS

Campus Events: Used PostgreSQL and SQLAlchemy for storage. Created a Docker image and deployed a demonstration on AWS EC2 using environment-based configuration.

Built a basic HTML/CSS/JavaScript registration page that submits requests to the API. Used Pandas to clean event attendance data and export summary reports.

Personal Expense API: Implemented a Flask and SQLite application using classes for expense categories and lists/dictionaries for reporting; wrote unit tests for validation.

EDUCATION

B.E. Computer Science, Example Institute | 2026. Relevant study: programming, databases, software testing and data structures.
