Dev Demo

dev.demo@example.com | Java backend developer | Fictional candidate

PROFILE

Junior Java backend developer with a six-month internship building and testing Spring Boot applications backed by PostgreSQL.

SKILLS

Java, OOP, collections, exception handling, Spring Boot, REST APIs, Bean Validation, JPA/Hibernate, SQL, PostgreSQL, Git, Maven, JUnit, Mockito, Docker and AWS EC2.

EXPERIENCE

Backend Intern, Example Commerce Lab (fictional) | January-June 2026

Implemented Spring Boot endpoints for carts, orders and order status updates. Validated JSON requests and added centralized exception handling with useful HTTP error responses.

Used JPA entities and PostgreSQL transactions for order storage. Wrote SQL joins for order summaries and debugged an incorrect transaction rollback.

Built with Maven, wrote JUnit and Mockito tests for business rules and invalid requests, and used Git branches with reviewed pull requests.

PROJECTS

Course Booking API: Personally designed course, learner and booking tables. Implemented Spring Boot CRUD routes, pagination, duplicate-booking validation and JPA repository queries.

Added JUnit tests for capacity limits, missing courses and validation errors. Packaged the API in Docker and deployed a demonstration on AWS EC2 with environment-based database configuration.

EDUCATION

B.E. Computer Science, Example Institute | 2026. Coursework: Java, OOP, data structures, databases and software engineering.
