Leena Demo

leena.demo@example.com | Java backend developer | Fictional candidate

PROFILE

Entry-level Java backend developer with practical API implementation and deployment experience.

SKILLS

Java, OOP, collections, exception handling, Spring Boot, REST APIs, JPA/Hibernate, SQL, PostgreSQL, Git, Maven, Docker and AWS EC2.

EXPERIENCE

Backend Project Trainee, Example API Lab (fictional) | January-June 2026

Implemented Spring Boot endpoints for creating and updating support tickets. Added request validation and exception handlers for missing tickets and invalid requests.

Mapped entities with JPA, wrote PostgreSQL queries and investigated a duplicate-ticket defect. Built the service with Maven and submitted changes using Git pull requests.

Checked endpoint responses manually using Postman and reviewed application logs to investigate defects.

PROJECTS

Support Ticket API: Personally designed ticket and comment tables, implemented CRUD routes and filtering, and integrated PostgreSQL storage through JPA.

Containerized the service with Docker and deployed a demonstration on AWS EC2 using environment variables for database configuration.

Wrote a manual checklist for creating tickets, invalid requests and record updates, and presented schema and API design decisions to a mentor.

EDUCATION

B.E. Computer Science, Example Institute | 2026. Coursework: Java, OOP, collections and relational databases.
